DIRECTOR’S STATEMENT

The OSU/NOAA Cooperative Institute for Marine Resources Studies (CIMRS) represents a strong, long-term, NOAA-university partnership dedicated to research in marine science, graduate and public education, and cooperation with regional industries and communities that are dependent on marine resources.

An integral part of the OSU’s Hatfield Marine Science Center (HMSC), CIMRS is a model cooperative institute for many reasons. By its co-location with three regional NOAA laboratories representing two NOAA Line Offices, the Institute is able to bring together research partners from a variety of disciplines to address complex multidisciplinary issues relating to the living and non-living components of the marine environment. It is also the administrative home for 28 research staff and 3 research faculty working on collaborative projects with NOAA investigators who serve as OSU courtesy faculty. No other OSU research institute provides both grant administration and personnel review in the manner of an academic department. In FY 2004, two CIMRS members sought promotion and were advanced in recognition of their excellent records of research and service. CIMRS faculty also conduct research with funding from agencies such as NSF and ONR, which extends the impact of the Institute and its value to NOAA.

The research focus of CIMRS addresses living and non-living marine resources and is thus linked to programs that require environmental sampling or observing within the ocean and programs that characterize seafloor habitats. This focus encompasses the broad field of marine fisheries (including fisheries oceanography, habitat research, and ecosystem-based management), geological/chemical oceanography, marine mammal acoustics, and the effects of climate change on marine ecosystems. It thus addresses ecosystem and climate mission goals in NOAA’s 5-year research plan and poises CIMRS research to contribute to NOAA’s 20-year research vision.

The Institute thrives because of the commitment of leaders from within the laboratories of its NOAA associates and the OSU Research Office. As a result during the past few years external research grant funding has grown, graduate student opportunities have diversified, and CIMRS has entrained many more OSU investigators from a broad range of disciplines to join together and address research problems of environmental, economic and social importance.

In summary, the scientific accomplishments of CIMRS demonstrate its value to both NOAA and the University. Its purpose is to serve as a bridge between traditional disciplines, a crossroad for fostering new ideas, and a dependable source of new research and analysis. It is anticipated that ongoing efforts will continue to raise the profile of the Institute and the partnerships it cultivates. For more information, please contact our website at <http://oregonstate.edu/groups/cimrs>.

Clare E. Reimers
Director, Cooperative Institute for Marine Resources Studies
ORGANIZATION

CIMRS is administered through the OSU Research Office with oversight from an Executive Board made up of members from the participating NOAA laboratories and collaborating OSU colleges and programs under the terms of a Memorandum of Understanding between OSU and NOAA/NMFS. A Science Advisory Council (SAC) gives input on research directions, progress, and policy to the Director. New members were invited to serve on the SAC in 2004 for 3-year terms.

EXECUTIVE BOARD

Rich Holdren (Chair)  Mark Abbott
Vice-Provost for Research, Oregon State Dean, College of Oceanic & Atmos.
University Sciences, OSU
Usha Varanasi  Robert Malouf
Director, Northwest Fisheries Science Director, Oregon Sea Grant, OSU
Center, NOAA
Eddie Bernard  George Boehlert
Director, Pacific Marine Environmental Director, Hatfield Marine Science
Laboratory, NOAA Center, OSU
Sherman Bloomer  Clare Reimers
Dean, College of Sciences, OSU Director, CIMRS (Ex Officio), OSU
Erik Fritzell
Assoc. Dean, College of Agricult. Sci., OSU

Ex-Officio – Clare Reimers
The number of CIMRS staff has grown steadily over the past 7 years as a result of new research initiatives in fisheries ecology, stock assessment, and marine mammal acoustics. The range of responsibilities and expertise of the staff have also grown and been recognized through promotion.

Faculty = Research Professors and the Director, ResAssoc = Research Associates, PrFac = Professional Faculty, Class = Classified Staff, SFRA = Senior Faculty Research Assistants, FRA = Faculty Research Assistants.
ADMINISTRATIVE SUPPORT

In FY2004, $140,114 was expended by the university for CIMRS administration. These funds provided salary and benefits for the Director, Clare Reimers (0.2 FTE), the Fiscal and Faculty Personnel Administrator, Jessica Waddell (1.0 FTE), and a part-time office specialist (0.5 FTE). Administration funds were also used for personnel training and staffing, routine office supply costs, communication, computer network fees, equipment storage, hosting meetings, and contributing to public events at HMSC. Administrative support provided by the HMSC business office is not included in this figure.

Additional directed support from the NWFSC for project coordination provided another portion of the Director’s salary and benefits (0.3 FTE).

“Marine Team” fisheries students experience survival training at HMSC.
PROJECTS SUPPORTED WITH CONTRIBUTED FUNDS FROM NOAA PARTNER LABORATORIES IN FY 2004

This section summarizes directed research projects undertaken by CIMRS with research funding received from NOAA through the Northwest Fisheries Science Center and the Pacific Marine Environmental Laboratory. All projects were approved by the Assistant Administrator and the Grants Management Division of NOAA after independent merit review.

Projects under Grant NA17FE2705
Total Award $1,777,363; 9/1/03-8/31/04

“The Effects of Ocean Variability on Marine Survival of Fishes”

This project supports the active monitoring of ocean conditions, zooplankton distributions, and fish populations off the coasts of Washington, Oregon and California. New field efforts and retrospective analysis of historical data are being undertaken with all efforts emphasizing relationships between ocean conditions and growth and survival of marine fishes. Specific focus areas are Plume Habitat and Pelagic Fish Ecology, Zooplankton Ecology, Nekton Distribution, Trophic Ecology, Pelagic/Demersal Fish Habitat and Bioacoustics Studies, and Long-term Indices of Annual Growth of Long-lived Groundfishes.

OSU Investigators, Research Staff: George Boehlert, Professor, Fisheries and Wildlife, William Pearcy, Professor Emeritus, College of Oceanic and Atmospheric Sciences; Vladlena Gertseva and Bryan Black, postdoctoral fellows; Becky Baldwin, Leah Feinberg, Joe Fisher, Julie Keister, Greg Krutzikowsky, Cheryl Morgan, Suzan Pool, Rian Hooff, Todd Sandell, Tracy Shaw, Mitch Vance (all CIMRS)

Collaborating NOAA Investigators: Ric Brodeur, Bob Emmett, Bill Peterson, Tom Wainwright, Kym Jacobson, FE/NWFSC; Mary Yoklavich, SWFSC

“Watershed and Estuarine Processes”

Cumulative habitat loss, species introductions, and waste inputs have altered biological communities and reduced the resilience of many Northwest estuaries. This project concentrates on studies of Estuarine Habitats and Salmonid Life History and surveys of Salmon Utilization within the Columbia River Estuary.

OSU Investigator: Ian Fleming, Associate Professor, Fisheries & Wildlife, COMES

Collaborating NOAA Investigator: Dan Bottom, FE/NWFSC
“Fisheries Habitat Investigations”

The objective of this work is to integrate many types of oceanographic, biological, geological (e.g., seafloor bathymetry, sidescan sonar images, sediment and rock types, active fault zones, observations and measurements from submersibles) and groundfish fisheries data (including fishery dependent records) into a Geographical Information System (GIS) so that information can be overlain on spatial maps. These maps are then utilized to characterize, classify and predict the distribution of seafloor habitats, to study relationships between habitat type and productive versus unproductive fishing grounds, and to document the consequences of management measures on fishing activities and habitat. See our Research Highlight Section, Page 12.

OSU Investigators, Research Staff: Chris Goldfinger, Associate Prof., College of Oceanic and Atmospheric Sciences, Jack Barth, Professor, College of Oceanic and Atmospheric Sciences, David Sampson, Associate Professor, Coastal Oregon Marine Experimental Station; Anatoli Erofeev, Robert O’Malley, Rondi Robison, Chris Romsos (all COAS); Scott Heppell, Assist. Prof. Senior Res., Dept. Fisheries and Wildlife

Collaborating NOAA Investigators: Waldo Wakefield and Elizabeth Clarke, FRAM/NWFSC

“Socio-Economics”

This project recognizes the need for research on the linkages between fisheries and ecosystem management and regional economics. OSU is analyzing methods to alleviate negative impacts of regulation through economic incentives and alternative forms of technology. The immediate focus area is Using Economic Incentives to Manage Bycatch in West Coast Groundfish Fisheries.

OSU Investigator: Susan Hanna, Professor, Agriculture and Resource Economics Department

“Cooperative Research”

Information on West Coast groundfish can be increased through collaboration with the fishing community and other constituents interested in groundfish research and data sharing. Under this project, programs are enabling new collaborative research between scientists and constituents. This and other outreach efforts will increase communications between university scientists, the NMFS, and the fishing community. The program should also greatly enhance transfers of knowledge between scientists and constituents, and between the scientific community and the public.

The main project elements in 2004 are:

a) The Port Liaison Project. This program matches industry collaborators with university scientists through a proposal and advisory committee process.
b) RFP Funded Projects:
*Predator-prey dynamics in recovering systems: Influence of strong year classes of lingcod (Ophiodon elongates) on recovery of rockfishes (Sebastes spp.) on the Oregon coast*

**Marine Team: Student-led Investigations in the Marine Sciences**

c) Outreach. This effort is expanding the Headsup website to provide cooperative research information and general outreach information to fishers.

**OSU Investigators:** Susan Austin Goblirsch, Oregon Sea Grant Extension Agent, Lincoln Co. Extension Service; Flaxen Conway, Sociology Department; Selina Heppell and Scott Heppell, Department of Fisheries and Wildlife

**Collaborating NOAA Investigators:** Elizabeth Clarke, Waldo Wakefield, John Harms, FRAM/NWFSC
“Stock Assessment Improvement”

The focus of this project is the incorporation and evaluation of environmental parameters into population assessments of West Coast sablefish. Statistical studies are also being performed to establish the suitability of sea level as an independent variable and its control on recruitment trends. Incorporation of recruitment predictions in stock assessment models is being tested.

CIMRS also directed a search for a Visiting Professor in Marine Stock Assessment to join the institute for collaborative research in FY2005.

OSU Research Staff: Jim Colbert, CIMRS

Collaborating NOAA Investigator: Michael Schirripa, FRAM/NWFSC

Projects under Grant NA17FE1167
Total Award $104,639; 6/1/03-5/31/04

“Relationships Between Disease, Natural and Anthropogenic Factors that Influence Disease Prevalence and Survival of Juvenile Salmon in the Estuarine and Nearshore Ocean Environment”

The overall objective of this project is to identify mechanisms and processes linked to environmental variables that can cause parasites to have an influence on the size and population structure of wild salmonids.

OSU Investigators, Research Staff: Larry Curtis, Professor, Environmental and Molecular Toxicology; Paul Reno, Associate Professor, Microbiology; Coral Stafford, Faculty Research Assistant; Claudia Bravo, GRA, CIMRS

Collaborating NOAA Investigators: Mary Arkoosh, Tracy Collier, EC/NWFSC
Projects under Grant NA17RJ1362
Total Award $2,042,609; 7/1/03-6/30/04

“Ocean Environment Research”

This multidisciplinary project seeks to quantify the effects of submarine volcanic and hydrothermal activity on the ocean. Continuous acoustic monitoring of spreading centers in the world’s oceans allows investigators to detect and study the chemical, physical, geological and biological effects of tectonic activity on the global ocean and to follow free-ranging populations of large cetaceans. Specific focus areas are Ocean Observing Systems, Hydrothermal Venting, Marine Mammal Acoustics, Microbiology of Seafloor Vents and Eruptions, Fisheries Oceanography. More than half of the funding covers ship-time expense for GLOBEC projects.

OSU Investigators, Research Staff: William Chadwick, Associate Prof., Sr. Res., Robert Dziak, Associate Prof., Sr. Res., Haru Matsumoto, Research Associate, David Mellinger, Assistant Prof., Sr., Res.; Andra Bobbitt, Leigh Evans, Matthew Fowler, Ron Greene, Joe Haxel, Sara Heimlich, Andy Lau, Susan Merle, Sharon Nieuirkirk (all CIMRS)

Collaborating NOAA Investigators: Robert Embley, Chris Fox, Stephen Hammond, John Lupton (all PMEL/OERD)
CIMRS RESEARCH HIGHLIGHT

In May 2004, OSU scientist Scott Heppell and graduate student Marlene Bellman completed an investigation into the distribution of bottom trawl effort off the Oregon coast. The primary objective of this study was to examine trawl effort shifts over benthic habitats in response to regulatory changes in the US West coast groundfish fishery. In particular, this study focused on a PFMC-mandated restriction in trawl footrope size for landing nearshore and shelf rockfish. This regulation, enacted in 2000, linked various groundfish trip limits to large and small footrope configurations (PFMC 2000, 1999). By inhibiting the large footrope gear necessary to pass over rough terrain and obstructions, this restriction was designed to redirect fishing effort off of high-relief rocky areas where depleted rockfish species are most abundant.

The investigators used habitat maps prepared by OSU Associate Prof. Chris Goldfinger to select five specific study sites located along the Oregon coast, which represented major rocky banks that were thought to be high-intensity targets for rockfish trawling prior to the implementation of the footrope restriction. They demonstrated that there has been a substantial shift in trawl effort off of rocky banks, with an average decrease in fishing intensity of 86% in 2000 and 2001 when compared to 1998 and 1999. The figure on this page shows the shift in trawl fishing effort at one study site. This work indicates that not only was the PFMC footrope restriction successful in moving effort away from sensitive habitat, but that effort can be quantified with regard to a variety of factors, including physical habitat type.

CIMRS FELLOWSHIP OPPORTUNITIES AND GRADUATE STUDENTS SUPPORTED THROUGH JOINT PROJECTS

Fisheries Oceanography Graduate Fellowships

The goals of NOAA’s strategic plan are to build sustainable fisheries, to recover protected species, and to sustain healthy coasts. These goals require the support of sound scientific research to build the knowledge base for maintaining economically viable fisheries and, at the same time, minimize anthropogenic impacts on marine ecosystems. To accomplish these goals a Fisheries Oceanography Graduate Fellowship program was started within CIMRS in 2003 with funds provided by the Alaska Fisheries Science Center of NOAA/NMFS. This program seeks to recruit highly talented M.S. or Ph.D. students to oceanography, fisheries or wildlife science, resource economics, zoology, environmental science or a related field at Oregon State University, with an intended focus on ecological and natural resource issues in the Northeast Pacific, Aleutian Islands, and Bering Sea. In 2004, three fellowships (first awarded in 2003) were continued.

2004 Fellows and Projects

Cara Fritz  Towards Establishing a Natural Disturbance Mosaic on the Pacific Northwest Margin
Major Professor: Rob Wheatcroft, COAS

Julie Keister  Investigations of Variability of Mesoscale Energy off the Coast of Central Oregon and Northern California
Major Professor: Tim Cowles, COAS

Rob Suryan  Comparative Foraging Ecology of Five Species of Pacific Seabirds: Multiscale Analyses of Marine Resource Utilization
Major Professor: Dan Roby, F&W

GRADUATE STUDENTS SUPPORTED THROUGH JOINT RESEARCH PROJECTS

A growing number of graduate student projects are being supported with contributed grant funds from the Northwest Fisheries Science Center. The CIMRS Director works to match qualified students with projects and courtesy faculty based at the Hatfield Marine Science Center.

Ph.D. Candidates – Fisheries and Wildlife

Todd Miller  1999-2005  Trophic Dynamics within Varying Conditions of the Northern California Current

FY 04

CIMRS OUTREACH ACTIVITIES

Educational and scientific outreach is important in all aspects of CIMRS research. Websites are a venue that reaches an enormous audience. CIMRS investigators feature their collaborative research efforts in the fields of fisheries oceanography, geophysical and acoustic monitoring of spreading centers, ocean exploration, and bioacoustic monitoring of large cetaceans at several sites hosted by NOAA. One award winning website (http://www.pmel.noaa.gov/vents) features educational curricula, video clips of in situ seafloor experiments, and animated 3-dimensional fly-through movies of seafloor ridges.

The Visitor Center at OSU’s Hatfield Marine Science Center also lends a convenient outlet for educational displays and programs. OceanQuest is a program that connects visiting audiences to real-time shipboard research through the use of interactive websites. NOAA’s Teacher-at-Sea Program and the Ocean Exploration Program have helped sponsor educators on land and at sea who together present and interpret research activities for the general public. CIMRS investigators have also collaborated with Sea Grant Educational staff to design and prepare interactive exhibits. At the “ROPOS Exhibit”, visitors can pilot a remotely operated vehicle to the seafloor and back with a joystick while viewing computer-generated and real video clips of the seafloor.

Sound in the Sea, a non-profit education program, for middle- and high-school aged students, is offered by CIMRS researchers through OSU’s Saturday Academy, at OSU’s Hatfield Marine Science Center. It offers a unique two-session hands-on engineering workshop that emphasizes marine biology and acoustics. Students make their own simple underwater hydrophone and then test it in Yaquina Bay.
A land seismometer exhibit was completed for the HMSC Visitor Center just a week before a 4.7 magnitude earthquake in Newport.
