

Safety Committee Meeting
July 16, 2009

Attending: Randy Walker, Sean Matson, Rick Brown, Carol Cole, Faith Cole, Dave Johnson

Meeting originally scheduled for July 9th was postponed for a week.

SeaFest: brief discussion of event, noting no safety issues occurred.

Reservoir: cracked rail at top must be repaired/replaced. Faith Cole will follow up.

Seismic retrofit: tying roof into sidewalls, for maximum strength and stability. Work will continue for quite some time; after September 1, work will begin in the Visitors Center.

RSF cleanup: brief discussion of pending project, air quality, rodent residue, ceiling tile replacement, inspection of area above.

Student Housing:

- 1) Striping of parking lot should occur in near future; determined that usage requires at least two handicapped spaces in student lot.
- 2) Steps/railing behind Lee/Winton need to be replaced.
- 3) Outside lights on south side of bunkhouse are still hanging by a cord.

Building signs: for emergency services; determined that signs should be consistent, numbers large enough to read from emergency vehicles at night. Randy Walker and Rick Brown will follow up.

Lab signs: noted that new signs have been placed outside the labs within the HMSC building, listing equipment and chemicals that would be found in each lab. There is a template that can be used, and it will be forwarded to Faith Cole for EPA use.

Contact names: lists for emergency contacts are not up to date.

HazMat: Thea will be here next week, packing out the HazMat Shed; if there are materials that need to be handled, they must be moved over to HazMat before then. Possible that a HazMat shipping class will be scheduled; Deb Boylen (on-site) is certified, and can certify HazMat shipping packaging.

MBP red light: has been installed, and is working satisfactorily – providing adequate light for entrance, without disrupting experiments
