Ecology of Marine and Estuarine Birds

(FW 331) CRN: 72895

Instructor: Jane Dolliver, Dept. Fisheries and Wildlife

Course Description

Marine and estuarine birds are well adapted for life at or along the sea. In this course we will examine the morphology, physiology, foraging ecology, and biogeography of these species through lecture, field, and laboratory experiences. Come join us on the Oregon Coast this summer to learn how birds thrive in the ocean environment!

Additional marine science courses available. In-state tuition for all students! Student housing scholarships available.
