RESEARCH

Research Experience:

2014-Present. Dissertation Research. “Influence of fine-scale patchiness on larval fish trophodynamics and condition in the Straits of Florida.” HMSC, OSU.

Examining how larval fish trophodynamics, and their biological consequences, are influenced by spatial variability in the Straits of Florida. Mesozooplankton, larval fish, and phytoplankton sampling (MOCNESS, CTD rosette); plankton imagery with the *In Situ* Ichthyoplankton Imaging System (ISIIS). Larval fish identification and enumeration, gut contents, otolith microstructure, and lipid analysis.

2011-2014. Masters Research. “Long-term change in copepod community structure in the Western Antarctic Peninsula: Linkage to climate and implications for trophic interactions and carbon cycling.” Palmer Antarctica Long-Term Ecological Research program (LTER), VIMS.

Analyzed a 21-year time series of copepod abundance and community structure in the Western Antarctic Peninsula set in relation to climate drivers. Conducted copepod grazing and egestion experiments to examine the importance of copepods in carbon cycling. Meso- and macrozooplankton collection (oblique net tow, MOCNESS), identification, and enumeration. Copepod taxonomy. Plankton analysis using ZooScan. Copepod gut fluorometric analysis.

2010. Research Assistant. Amazon iNfluence on the Atlantic: CarbOn export from Nitrogen fixation by DiAtom Symbioses (ANACONDAS), VIMS.

Meso- and microzooplankton sampling (MOCNESS, ring net, niskin bottle). Mesozooplankton grazing experiments. Microzooplankton dilution experiments.

2009-2010. Honors Thesis Research. “Time series of vertical flux of zooplankton fecal pellets on the continental shelf of the western Antarctic Peninsula.” Palmer LTER, VIMS.

Identification, measurement, and enumeration of zooplankton fecal pellets from five years of sediment trap samples. Stereomicroscope imaging, and analysis with Image-Pro Plus software. Organic carbon and nitrogen quantification using combustion analysis.

2008. Undergraduate Volunteer. VIMS.

Assisted with studies of dissolved organic matter (DOM) cycling by meso- and microzooplankton. Prepared artificial seawater and nutrient media, cultured microzooplankton and phytoplankton, chlorophyll *a* analysis.

2007. Undergraduate Volunteer. Keck Environmental Lab, College of William and Mary.

Assisted with a field project monitoring and documenting the populations of *Lampetra aepyptera* (Least Brook Lamprey) in local Virginia streams.

2003-2006. Laboratory Assistant. Great Lakes Scientific, Inc., Stevensville, MI.

Experience at a private, independent laboratory offering microbiological, chemical, and nutritional analyses of food and water samples. Performed sample collection, preparation and microbiological analysis for Total Plate Count, Coliform/E. coli, Staphylococcus, Salmonella, Yeast/Mold, and Listeria. Conducted independent projects on microbial health hazards on fixtures in public restrooms, and lead contamination in drinking water.
